OKTOBERFOREST

Did you know forests store and filter 40% of our world's fresh water?

Clean water depends on healthy forests.

TREE LEAVES AND BRANCHES PREVENT EROSION BY SLOWING DOWN RAINFALL BEFORE IT REACHES THE FOREST FLOOR.

WHEN RAINWATER REACHES THE FOREST FLOOR, IT'S NATURALLY FILTERED AS IT MOVES THROUGH THE SOIL.

TREE ROOTS SLOWLY ABSORB THE WATER AND HELP KEEP EXCESS NUTRIENTS AND SEDIMENT OUT OF WATERWAYS.

We're on a mission to plant a billion trees.
